DALI-2 Display 4" und 7"

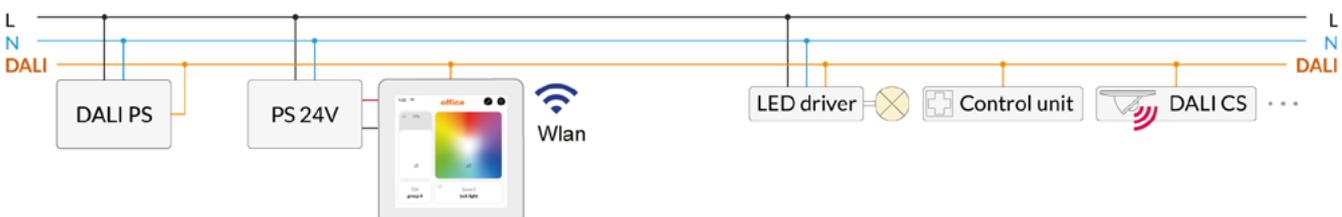

The capacitive colour display with 24-bit colour depth allows, depending on the model, commissioning as well as control and operation of a DALI system. The display can be individually designed using numerous widgets. Supported functions are dimming and switching of groups, recall of scenes, RGB colour

management and colour temperature control. The display has a DALI and a WLAN interface. Depending on the model, it is also possible to measure and display the room temperature, humidity, air pressure, air quality, etc. of the integrated sensors.

NAME	ARTICLE NUMBER	BRIEF DESCRIPTION	INTERFACE	OPERATING TEMP. (TA)	DIMENSIONS (MM)
DALI-2 Display 7" (white)	86456840-W	configurable control elements for switching, dimming, scenes and colour control	DALI, WLAN, Ethernet	-10 ... +50°C	178×111×8
DALI-2 Display 7" plus (white)	86456840-P-W	configurable control elements for switching, dimming, scenes and colour control, addressing, time switch, sequencer, circadian daylight schedule	DALI, WLAN, Ethernet	-10 ... +50°C	178×111×8
DALI Display 4" (white)	86456841-W	configurable control elements for switching, dimming, scenes and colour control	DALI, WLAN	-10 ... +50°C	88×88×8,5
DALI-2 Display 4" plus (white)	86456841-P-W	configurable control elements for switching, dimming, scenes and colour control, addressing	DALI, WLAN	-10 ... +50°C	88×88×8,5

Installation example DALI-2 Display 4"

The user interface of the DALI-2 display

The user interface of the DALI-2 display is made up of individual pages (boards) and the operating elements (widgets) on them.

Board
name of the page (board) is displayed on top, any number of boards can be created.

Widgets
control elements with different functions: ON/OFF, dimming, colour temperature, colour, scenes, visualization of sensor values, links to boards, DALI-2 instances, etc.

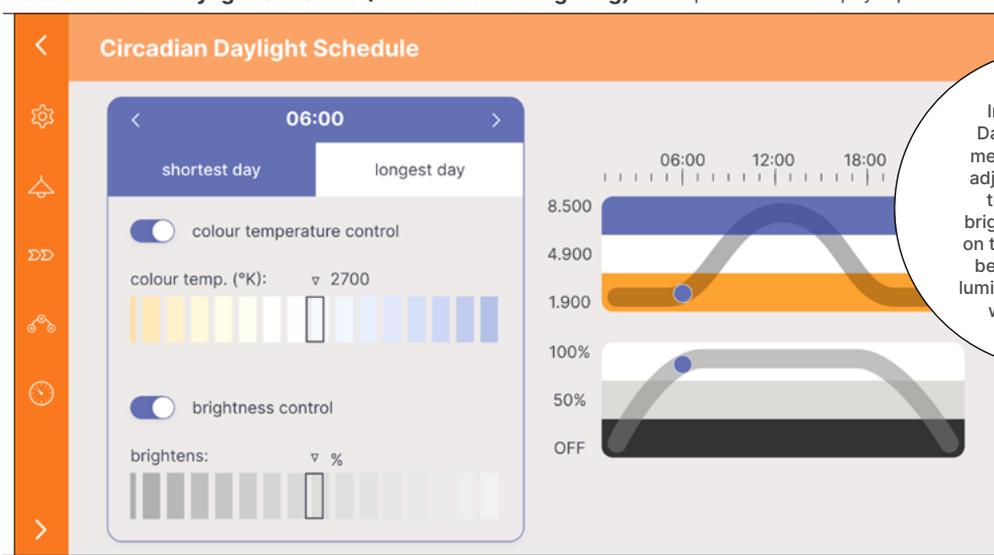

Configuration menu
Settings for boards, general settings, and settings for the DALI system

Editor
for creating and editing boards and widgets

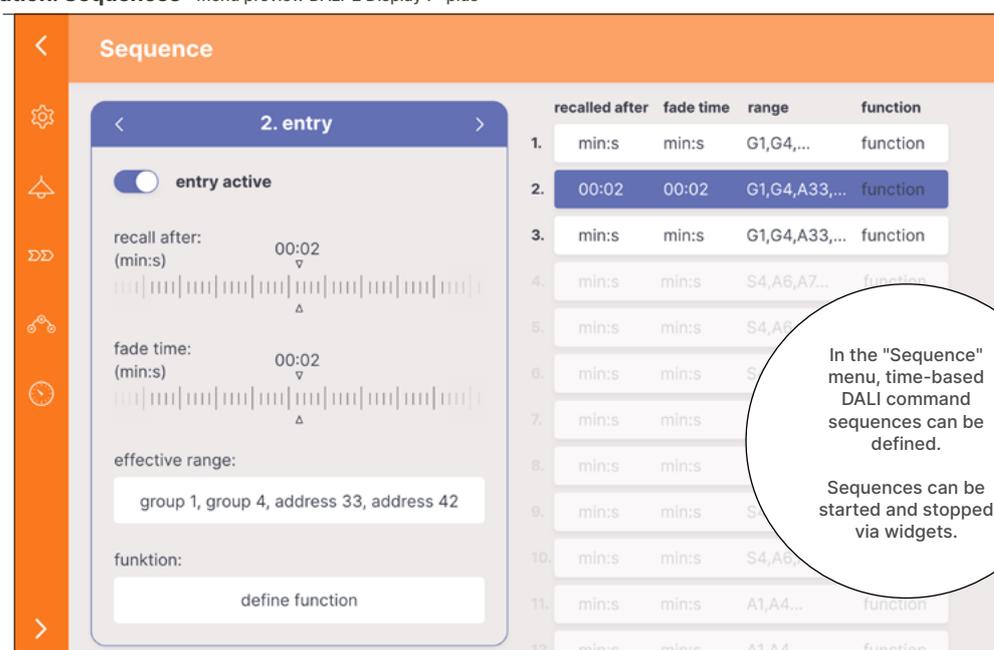

Navigation
move finger up and down on the screen to navigate up and down, swipe right and left to switch between boards

Automation: Circadian Daylight Schedule (Human Centric Lighting) – menu preview DALI-2 Display 7" plus

In the "Circadian Daylight Schedule" menu, the automatic adjustment of colour temperature and brightness depending on the time of day can be set for DALI DT8 luminaires with tunable white capability.

Automation: Sequences - menu preview DALI-2 Display 7" plus

In the "Sequence" menu, time-based DALI command sequences can be defined. Sequences can be started and stopped via widgets.

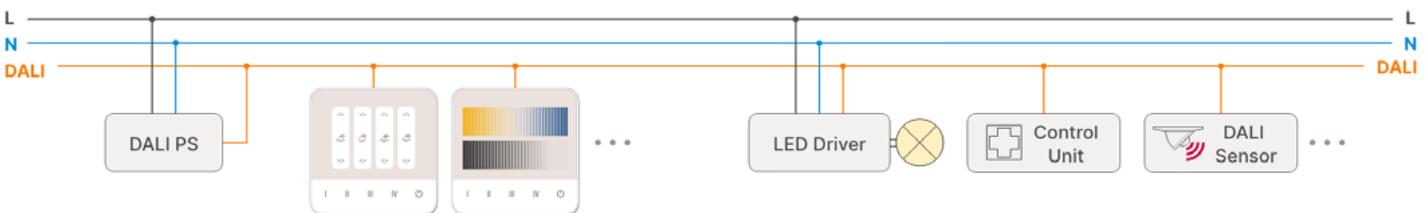

DALI-2 Touchpanel

The DALI-2 Touchpanel is a multifunctional control unit with up to 16 freely configurable buttons. The number of buttons and the associated DALI commands can be set in the DALI Cockpit Software. The device can be adapted to a wide variety of applications. Several standard user interfaces are available and customer-specific designs can be implemented upon request. In addition to the standard functions of dimming, switching, scene recall, etc., predefined macros such as setting the colour temperature, dynamic scenes and sequences, as well as user defined command lists are supported.

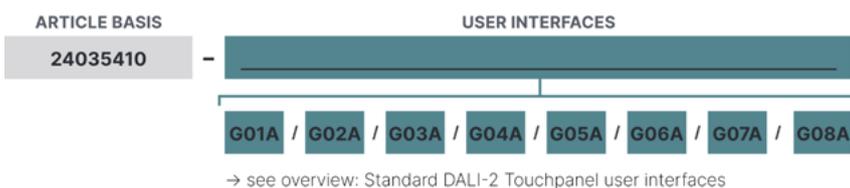

NAME	ARTICLE NUMBER	BRIEF DESCRIPTION	SUPPLY	DIMENSIONS (MM)

Callouts:

- show/hide buttons/touch areas in the preview (top left)
- load image for the Touchpanel preview (top left)
- delete button
- the button position is displayed in the preview (top left)
- preview: position of the various buttons
- settings for each button (max. 16 buttons)
- selection of the effective range: broadcast, groups or individual addresses
- button function: short press, long press, alternating pulses and many other functions
- assigned commands: e.g. light intensity (%), dimming, max, min, scene 0-15, macros, etc.
- Devices can also be ordered with customer-specific settings!

DALI-2 ROT

Rotary and push button with DALI output for fast and precise control of brightness, colour, or colour temperature. All standard functions such as dimming, switching, scene recall, etc. are supported.

The DALI Cockpit PC Software can be used to set the operating mode, effective range and individual DALI commands for the push button and rotary knob.

The standard device has an application controller but can be set to instance mode as well. The module "-D2" only supports the instance mode (sending event messages instead of direct control commands) for integration in higher-level building management systems with DALI connection, such as those from WAGO or Beckhoff.

The device can be mounted on commercially available flush-type installation boxes and is supplied by the DALI line. Rotary knob and covers are available in white and black. Furthermore, the module can be combined with covers from third-party suppliers (shaft= Ø4 mm, adapter for Ø6mm is included in the scope of delivery).

Customer-specific designs can be implemented upon request. The module "-NFC" supports, in addition to the configuration via the DALI Cockpit PC Software, the adjustment of selected settings via smartphone (NFC capable) and the Lunatone NFC app.

NAME	ARTICLE NUMBER	SUPPLY	CURRENT CONSUMPTION DALI	OPERATING TEMP. (TA)	INSTALLATION	DIMENSIONS (MM)

---	--	--	---	---

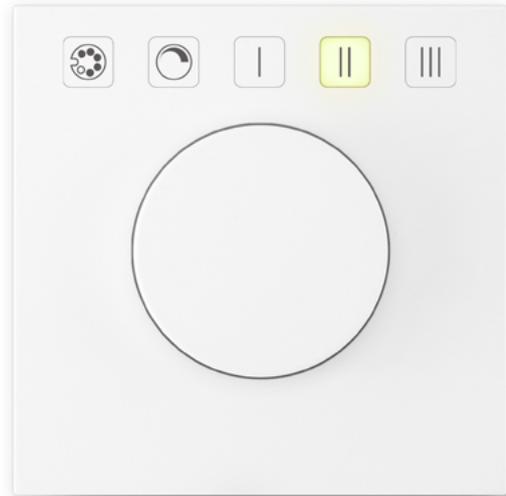

DALI-2 ROT Touch

Rotary and push button with capacitive sensor buttons for quick and precise control of brightness, colour, or colour temperature. Functionality and effective range for the rotary pushbutton can be set with the 3 or 5 capacitive buttons. The capacitive button will light up after being pressed to indicate the selected mode, the rotary knob will then control for example colour or brightness. Furthermore, it is possible to send individual DALI commands via the capacitive buttons to e.g., recall a scene. Several standard user interfaces are available and customer-specific designs can be implemented upon request.

The DALI-2 ROT Touch supports, in addition to the configuration via the DALI Cockpit PC Software, the adjustment of selected settings via smartphone (NFC capable) and the Lunatone NFC app.

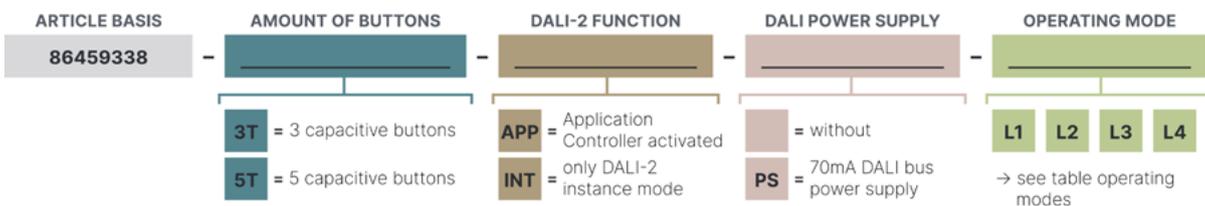

The device can be mounted on commercially available flush-type installation boxes. It is directly supplied by the DALI line. A version with DALI bus power supply (-PS) is also available.

The -INT module only supports the instance mode (sending event messages instead of direct control commands) for integration in higher-level building management systems with DALI connection, such as those from WAGO or Beckhoff.

NAME	ARTICLE NUMBER	SUPPLY	CURRENT CONSUMPTION DALI	OPERATING TEMP. (TA)	INSTALLATION	DIMENSIONS (MM)

DALI-2 Switch Cross NFC

Pushbutton module with four programmable buttons. With the DALI Cockpit Software, or via smartphone (NFC capable) and the Lunatone NFC app, each button can be individually configured with target address, button behaviour and DALI commands. In addition to the standard functions of dimming, switching, scene recall, etc., predefined macros such as setting the colour temperature, dynamic scenes and sequences, as well as user defined command lists are supported. Several flexible standard user interfaces are available and customer-specific designs can be implemented upon request. The device can be ordered with factory setting "application controller" or "instance mode". The factory setting can be changed with the DALI Cockpit Software or Lunatone NFC App (module "-NFC"). When used as "application controller" the device sends direct control commands. In the "Instance" mode only event messages are sent for integration in higher-level building management systems with DALI connection, such as those from WAGO or Beckhoff. The DALI-2 Switch Cross "-NFC" supports, in addition to the configuration via

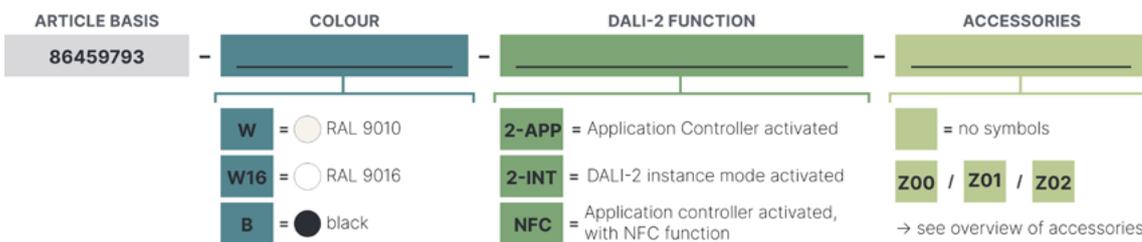

image (from left to right): RAL9010; RAL9016; black

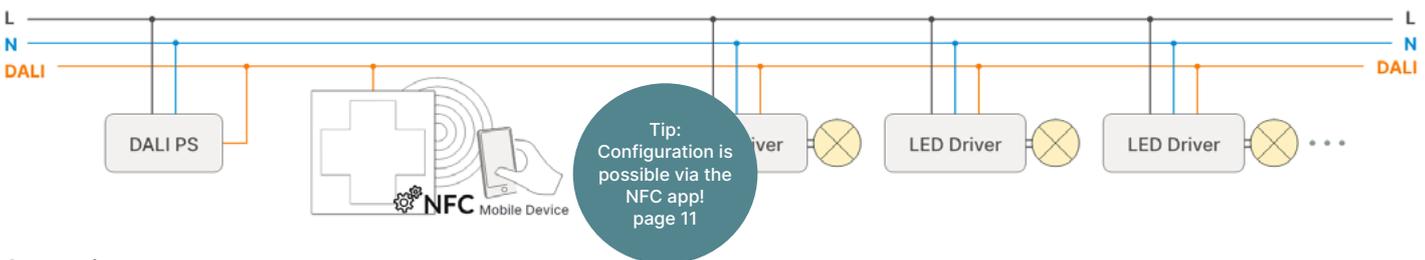

the DALI Cockpit PC Software, the adjustment of selected settings via smartphone (NFC capable) and the Lunatone NFC app.

NAME	ARTICLE NUMBER	SUPPLY	CURRENT CONSUMPTION DALI	OPERATING TEMP. (TA)	INSTALLATION	DIMENSIONS (MM)

DALI-2 MC Pushbutton Coupler

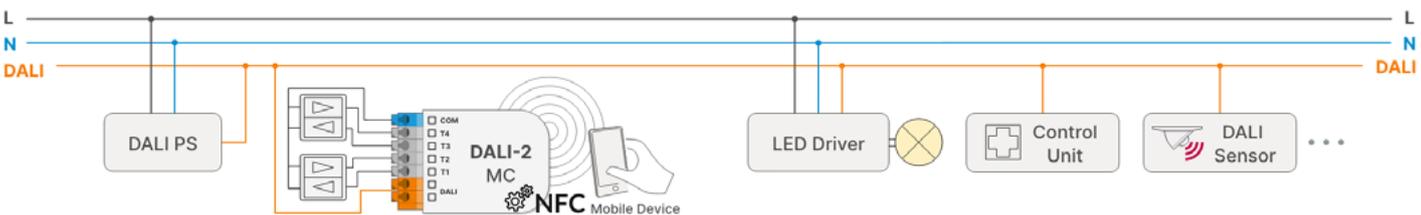

Pushbutton coupler with 4 inputs to connect standard potential free switches or pushbuttons. Each input can be individually configured with target address, button behaviour and DALI commands. In addition to the standard functions of dimming, switching, scene recall, etc., predefined macros such as setting the colour temperature, dynamic scenes, and sequences, as well as user defined command lists are supported. The device can be ordered with factory setting "application controller" or "instance mode". The factory setting can be changed with the DALI Cockpit Software or Lunatone NFC App (module "-NFC"). When used as "application controller" the device sends direct control commands. In the "Instance" mode only event messages are sent for integration in higher-level building management systems with DALI connection, such as those from WAGO or Beckhoff. The device is designed to fit behind a switch in a flush-type installation box. The DALI-2 MC

NFC supports, in addition to the configuration via the DALI Cockpit PC Software, the adjustment of selected settings via smartphone (NFC capable) and the Lunatone NFC app.

NAME	ARTICLE NUMBER	FACTORY SETTING	NFC	SUPPLY	OPERATING TEMP. (TA)	DIMENSIONS (MM)

Standard config | Alternative config

Destination Addresses

1:	All (DALI Broadcast)	
2:	none	
3:	none	
4:	none	

Interpret scene commands as: Ignore

Function: BF6 - Dim button: CmdX/CmdY/UP/DOWN depending on actual Light Level

sending ON AND STEP UP as Start-Cmd Dim Up Dim Down

Command X: Light Level (DAP) | Light Level: 100 % | Fade time: [1] 0.7 sec

Command Y: RECALL MIN LEVEL

Callouts:

- Settings for each input
- alternative configuration can be activated and deactivated with scene commands or input 4
- interpretation of scene command for toggle functions
- assigned commands: e.g. light intensity (%), dimming, max, min, scene 0-15, macros, etc.
- selection of effective range: broadcast, groups or individual addresses
- button function: short press, long press, alternating pulses and may other functions

DALI-2 MC4L Pushbutton Coupler

DALI module with 4, from the DALI bus galvanically isolated, inputs for mains voltage. Each input can be individually configured with target address, button behaviour and DALI commands. In addition to the standard functions of dimming, switching, scene recall, etc., predefined macros such as setting the colour temperature, dynamic scenes, and sequences, as well as user defined command lists are supported.

The device can be ordered with factory setting "application controller" or "instance mode". The factory setting can be changed with the DALI Cockpit Software or Lunatone NFC App (module "-NFC").

DALI NFC App

The DALI NFC App provides an easy and straightforward way to set up and configure DALI devices with a smartphone using Near Field Communication (NFC). It enables reading of device information and configuration of basic settings, including effective range (broadcast, groups or individual addresses). An important advantage of NFC is that devices can be configured before installation, in an unpowered state.

DALI Daylight Bluetooth Interface

DALI Daylight Interface incl. App for iOS and Android allows basic adjustment for the following devices:

- DALI CDC: changing circadian curve settings (start, peak, end)
- DALI RTC: definition of 2 switching intervals per weekday
- DALI CS: setting light level and hold time
- DALI LS: switching between manual and constant light control, specifying the reference light level

DALI Daylight

Here you can download the app for your smartphone!

NAME	ARTICLE NUMBER	SUPPLY	CURRENT CONSUMPTION DALI	DIMENSIONS (MM)
DALI Daylight Bluetooth Interface	89453863	via DALI line	typ. 4mA	59 × 33 × 15

DALI-2 CS

Compact sensor module with motion detection (PIR) and light intensity measurement for DALI and DALI-2 systems. The module can either be used to directly control the DALI system (application controller) or simply to gather measurements for a building management system (instance mode).

The DALI-2 CS can be configured with the DALI Cockpit Software to send various DALI commands upon motion detection (on/off, max, min, scene, ...) to either the entire DALI system, groups, or individual addresses.

The module contains a light sensor and can automatically adjust room lighting (constant light control). 4 operating modes are supported: presence triggered constant light control; presence triggered lighting; constant light control; light control via threshold switches.

In addition, alternative behaviour and parameters can be set, for example to change between different destination addresses or light values.

Multiple sensors within one group will synchronise automatically. The device is powered directly by the DALI bus. The measured values can be read out via the DALI line.

DALI-2 CS is available in three different housings: for direct mounting on cavity walls or installation boxes (standard), for suspended ceilings (with spring), or for surface mounting (with backbox). Available housing colours are pure white RAL 9010, traffic white RAL 9016 (-W16) or black (-B).

Factory setting: motion detection and 10min hold time before the off command.

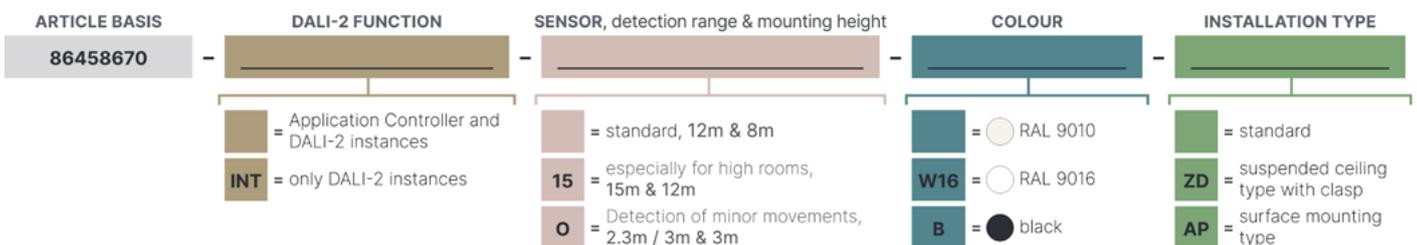

THP version
with additional
temperature,
humidity, air
pressure
& air quality
sensor!

DALI-2 CS THP: Version with integrated sensors for temperature, humidity, air pressure and optional air quality (Version -AQ).

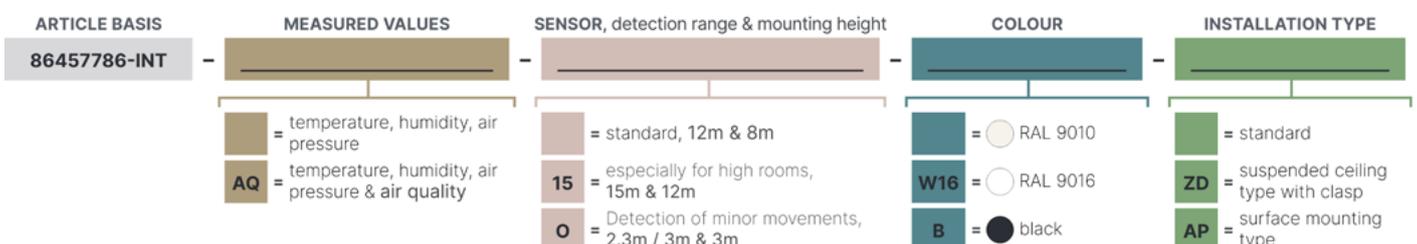

A version with mains connection and integrated bus supply (20mA) is also available upon request (housing with strain relief and sensor unit).

the behaviour of the sensor can be changed by recalling a scene

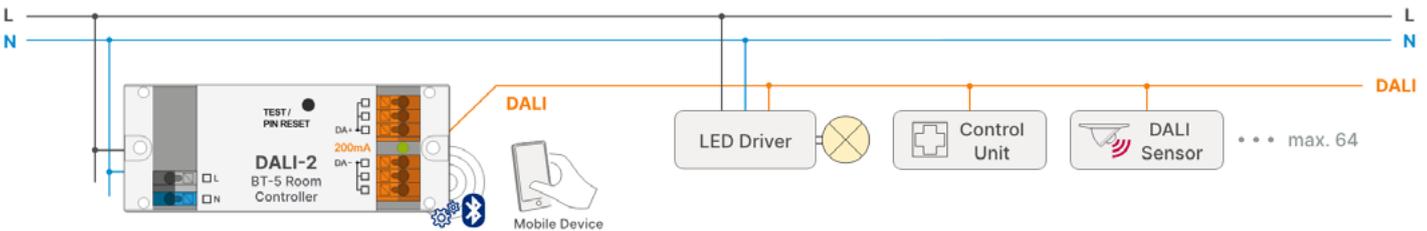

DALI-2 Room Controller

The DALI-2 Room Controller serves as an interface between Bluetooth 5.0 and DALI. The device is especially suited for room solutions. The controller provides both the bus power supply and the software interface for addressing, commissioning and control. The devices have an integrated DALI bus power supply (200mA) for a DALI system with up to 64 DALI devices. A connection with the Lunatone smartphone application DALI-Cockpit Mobile can be established via the Bluetooth interface. The app offers a clear and simple interface with an installation assistant, various configuration options and an individually configurable user interface to control connected devices.

DALI Cockpit mobile

Here you can download the app for your smartphone:

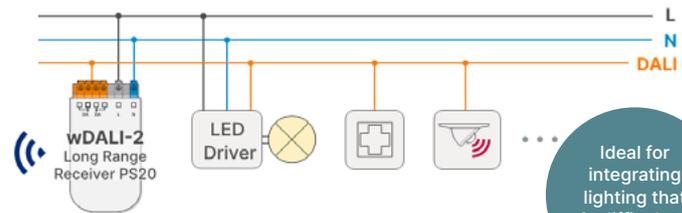

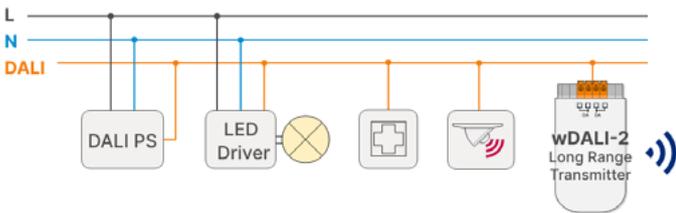

wDALI-2 BT5 Long Range Transmitter – Receiver

Module for the wireless connection of spatially separated DALI loads to a DALI system with Bluetooth 5 Long Range. The transmitter sends DALI commands from the DALI system to one or more receivers via radio signal. The devices in the sub-circuit can be controlled via broadcast or an assigned group. The modules support DALI-2 control commands. Easy configuration with the DALI Cockpit Software. The receiver is available with or without an integrated DALI bus power supply.

wDALI-2 BT5 Long Range Receiver	89453321-GRR	<ul style="list-style-type: none"> reception of DALI commands via radio signal all commands sent to the group assigned to the receiver are broadcasted to the sub-circuit 	via DALI line (3.8mA)	59 × 33 × 15
wDALI-2 BT5 Long Range Receiver PS20	89453321-GRRPS	<ul style="list-style-type: none"> reception of DALI commands via radio signal all commands sent to the group assigned to the receiver are broadcasted to the sub-circuit integrated DALI bus power supply (20mA) 	mains voltage 210-250VAC / 50-60Hz	59 × 33 × 15

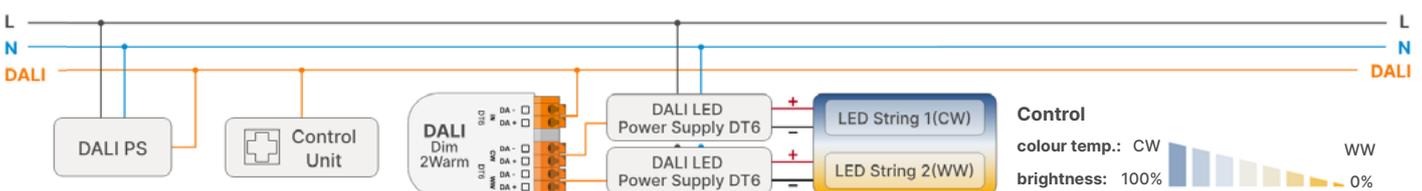

DALI-SubNet → The devices in the sub-circuit can be controlled via broadcast or an assigned group. The group can be defined with the DALI Cockpit Software.

DALI Dim2warm

The Dim2Warm module allows the simultaneous control of brightness and colour temperature, with only one DT6 DALI address. The lower the dimming value, the warmer the light. The output curves of the two channels can be adjusted individually via the DALI Cockpit Software. Therefore, this device can also be used for direct and indirect lighting with only one DALI address.

NAME	AARTICLE NUMBER	CURRENT CONSUMPTION DALI	OUTPUT	OPERATING TEMP. (TA)	DIMENSIONS (MM)
DALI Dim2warm	89453864	typ. 2mA + power requirement sub-circuit	2xDALI	-20°C ... +60°C	40 × 28 × 15

DALI LR PS 20mA

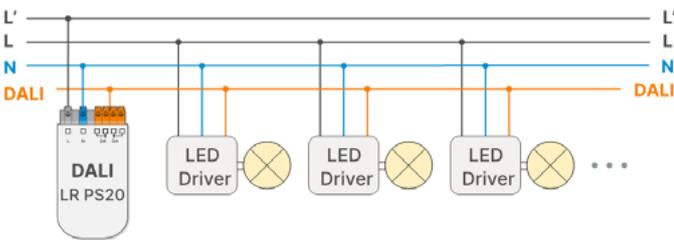

Compact control module for automatic night-time power reduction / brightness reduction. 2 operating modes are supported: Operating mode B1 for power reduction through mains phase or control phase, operating mode B2 for power reduction using virtual midnight calculation. All necessary settings can be made using rotary and switches. The device has an integrated bus power supply (20mA) for up to 7 standard DALI loads, an extension to max. 64 loads is possible with a DALI Expander. The DALI LR PS20 is suitable for installation in flush-type installation boxes or integration in protection class II devices.

NAME	ARTICLE NUMBER	SUPPLY INPUT	INTEGRATED DALI POWER SUPPLY	OPERATING TEMP. (TA)	DIMENSIONS (MM)
DALI LR PS20	89453880	mains voltage 220-240VAC / 50-60Hz	20mA	-20°C ... +55°C	59 × 33 × 15

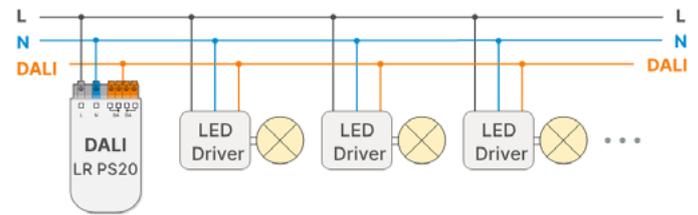

Operating mode B1:

Power reduction through the mains control phase, the DALI LR is supplied via a separately switched phase.

Operating mode B2:

The DALI LR reduces the power during the operating time. The time span can be adjusted, it is always symmetrical to the user-defined virtual midnight.

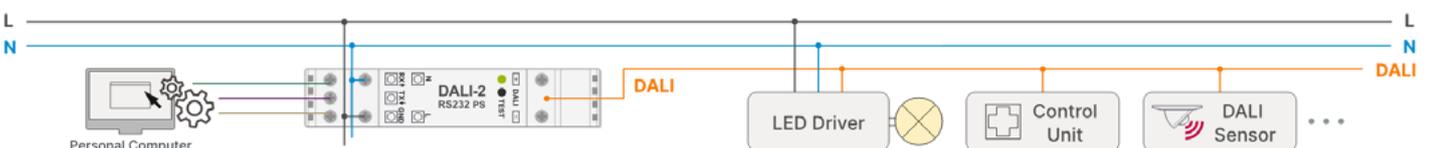

DALI-2 RS232 PS

Module with serial interface for communication with the DALI bus via RS232. Enables, for example, the connection of a PLC to a DALI system via RS232 for bidirectional data transmission. Suitable for addressing, configuration, status queries and monitoring. Housing variants for DIN Rail mounting or with strain relief for suspended ceilings are available. The -PS version has an integrated DALI bus power supply (240mA) for a DALI system with up to 64 DALI devices. **LUBA protocol:** Intelligent protocol for easy access to the DALI system.

NAME	ARTICLE NUMBER	SUPPLY	CURRENT CONSUMPTION DALI	SCI	CURRENT CONSUMPTION SCI	INTEGRATED DALI POWER SUPPLY	MODEL	DIMENSIONS (MM)

KNX DALI-2 Gateway

The KNX DALI-2 Gateway is DALI-2 and KNX certified. It is DALI multimaster capable and can transmit commands bidirectional from KNX to DALI and vice versa. The DALI system and the individual DALI devices can be configured with the DALI Cockpit PC Software and a suitable interface to the DALI bus (e.g. DALI USB). Via the gateway's product database in the KNX ETS Software the DALI devices can be matched with the respective data points and linked to the KNX components. All DALI device types (DT6, DT8-CW-WW, RGB, RGBW, RGBWAF, X-Y) are supported.

NAME	ARTICLE NUMBER	INTERFACE	SUPPLY	OPERATING TEMP. (TA)	DIMENSIONS (MM)
KNX DALI-2 Gateway	89453899	DALI, KNX	via DALI line	-20°C - +75°C	98 × 17,5 × 57

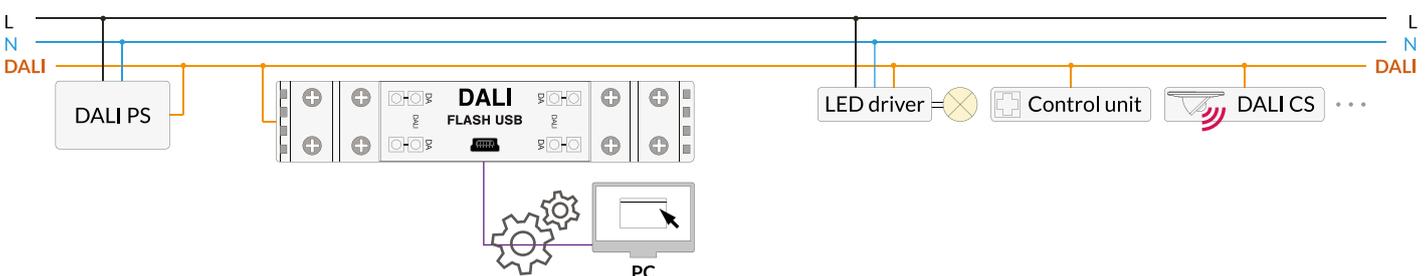

DALI Flash USB

The DALI Flash USB enables the communication between the DALI Cockpit PC Software and devices on the DALI bus. A flash memory is available to store the bus configuration and all device settings. Thus, they are permanently available, regardless of the PC used for initial configuration. The DALI Flash USB is suitable for DIN rail mounting.

NAME	ARTICLE NUMBER	INTERFACE	TYP. CURRENT CONSUMPTION	OPERATING TEMP. (TA)	DIMENSIONS (MM)
DALI USB Flash	89454248	DALI, USB	DALI: 6mA, USB: 10mA	-20°C ... +75°C	98 × 17,5 × 57

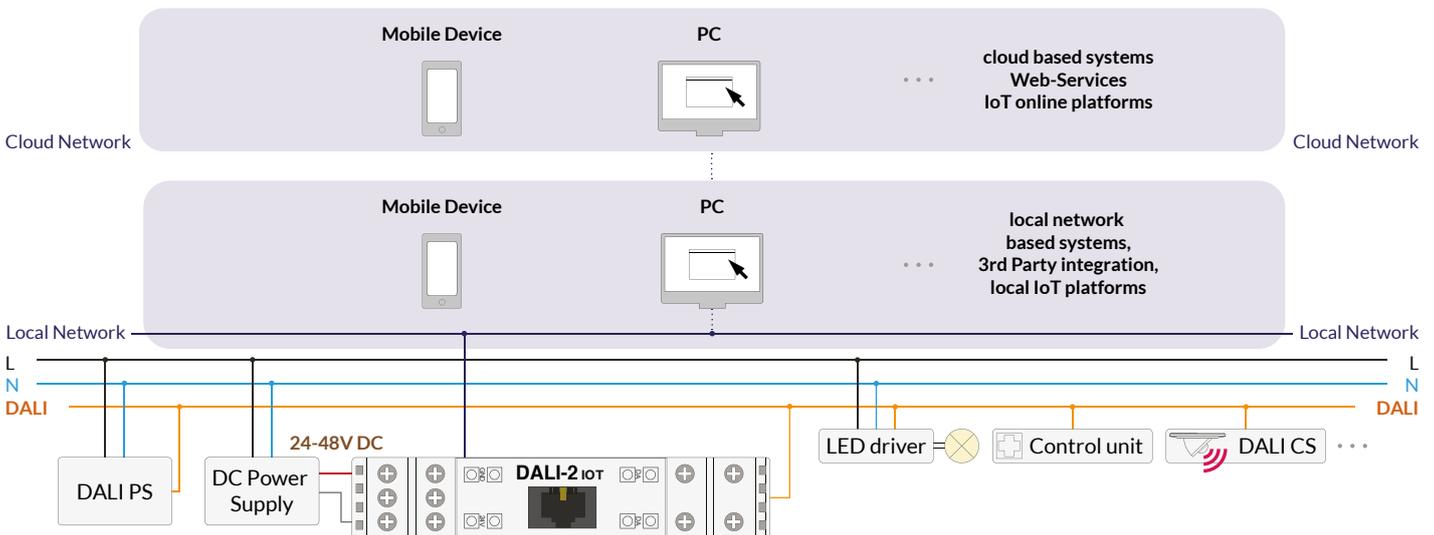

DALI-2 IOT Gateway

DALI-2 IoT Gateway is an interface to connect the DALI system with smart devices over the Internet of Things (IoT). This can be done via the local network or the Lunatone Cloud. With the DALI IoT Gateway, a simple realization of an intelligent system is possible, in which devices can be controlled and monitored with smartphones, PCs, etc. It is also possible to link several DALI lines. Basic services and an API documentation are available, to enable energy monitoring, remote support, and many other applications. The device allows integration in any IoT application using the available Software Development Kit (SDK).

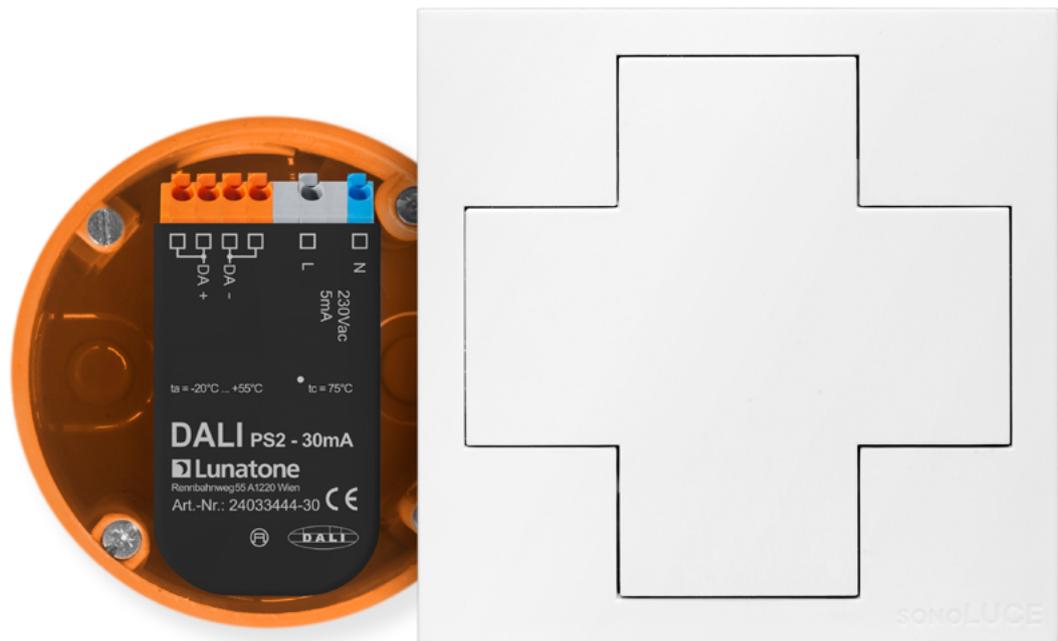

NAME	ARTICLE NUMBER	INTERFACE	SUPPLY	OPERATING TEMP. (TA)	DIMENSIONS (MM)
DALI-2 IOT Gateway	89453886	DALI, Ethernet	24V DC / 60mA	-20°C ... +60°C	98 × 17,5 × 57

Cloud-based systems like Google Home, Apple HomeKit, Alexa, Sonos, Philips Hue, etc. are either directly supported or available through IFTTT integration.
